

We make that exactly 3.53 peas.

We've got a passion for precision.

**And that applies to your
future with us too.**

Schenck Process is a technology and market leader in applied measurement technology. At 25 worldwide locations, our 1,800 employees develop innovative weighing, feeding, screening and automation solutions for a whole range of industries from cement, plastics and pharmaceuticals to power stations and transport automation. And we've been doing it for over 125 years.

This is your opportunity as an engineer specialising in mechatronics, process technology and machine construction. We are recruiting engineers like you for design, project management, technical order processing, service & commissioning, technical sales and the development of pioneering products.
